

ORIENTAL SHORTHAIR [OSH] (Standard Source: FIFe 1987)

The ideal cat is svelte, elegant, with long tapering line, supple and well-muscled. Overall type is allotted 50 points and the remaining 50 points are divided for coat, eye colour and condition.

Head:	Medium size, in proportion to the body, well balanced; wedge-shaped with straight lines. The wedge starts at the nose and gradually increases in width in straight lines on each side to the ears. There should be no whisker break in these lines. The skull viewed in profile is slightly convex. The nose is long and straight continuing the line from the forehead without any break. The muzzle is narrow. The chin and jaw are medium, the tip of the chin forming a vertical line with the tip of the nose. Neck long and slender.
Ears:	Large, pointed, wide at the base and continue the lines of the wedge. The outline of the head and ears form an equilateral triangle when viewed from the front.
Eyes:	The eyes are medium in size, neither protruding nor recessed; almond in shape and set slightly slanted towards the nose to be in harmony with the lines of the wedge.
Body:	Medium in size, long and svelte, well muscled but still dainty and elegant. The shoulders are not wider than the hips.
Legs and Feet:	Legs long and fine, in proportion to the body. Hind legs longer than front legs. Feet small and oval.
Tail:	Very long; thin (also at the base), tapering to a fine point.

NON-AGOUTI VARIETIES (SELF COLOURS)

No tabby barring in these varieties.

AGOUTI VARIETIES - PATTERNS

Classic (Blotched) Tabby (22) Markings to be broad and clearly defined on an agouti background. There is an M on the forehead, two or three spirals on cheeks and an unbroken line runs back from outer corner of eye. There are thumb marks on the ears and two unbroken necklaces on the upper chest. Vertical lines over the back of the head extend to the shoulder markings which are in the shape of a butterfly with both upper and lower wings distinctly outlined. Back markings consist of 3 vertical lines down the spine from the butterfly to the tail. The three stripes are separated by the agouti ground colour. Large solid blotches on each flank are encircled by one or more unbroken lines. Markings should be even on each side. A double row of spots (buttons) is to be seen on chest and stomach. The legs are regularly barred and the tail is regularly ringed with a solid coloured tip. The soles of the hind feet are solid coloured.

Mackerel Tabby (23) Markings to be narrow and clearly defined on an agouti background. There is an M on the forehead, two or three spirals on cheeks and an unbroken line runs back from outer corner of eye. There are thumb marks on the ears and two unbroken necklaces on the upper chest. An unbroken line runs from back of head to base of tail. Numerous narrow stripes starting at the spine run down vertically to the stomach separated by the agouti ground colour. Markings should be even on each side. A double row of spots (buttons) is to be seen on chest and stomach. The legs are regularly barred and the tail is regularly ringed with a solid coloured tip. The soles of the hind feet are solid coloured.

Spotted Tabby (24) The body and legs should be covered with numerous small spots, round or oval, clearly defined on an agouti background, and not running into each other. The greater the number of spots the better. The spots must be of uniform shape on each animal; they are as important as the colour however the colour of the spots must harmonise with the body colour. A faint spine line which may be spotted is permissible. A double row of spots (buttons) is to be seen on chest and stomach. There is an M on the forehead, two or three spirals on cheeks and an unbroken line runs back from outer corner of eye. There are thumb marks on the ears and broken or unbroken necklaces on the upper chest. Legs are

barred and/or spotted and the tail is regularly ringed with a solid coloured tip. The soles of the hind feet are solid coloured.

Ticked Tabby (25) Agouti background with head, neck, back and extremities showing pronounced ticking. Colour on stomach and inside of legs to harmonise with ground colour. Body free from any shading (other tabby pattern). There is an M on the forehead, two or three spirals on cheeks and an unbroken line runs back from outer corner of eye. A faint spine line is permissible. There are thumb marks on the ears and one or two broken or unbroken necklaces on the upper chest. Legs may or may not be barred and the tail may or may not be ringed but has a solid coloured tip. The soles of the hind feet are solid coloured.

Marbled Tabby (22) Markings, while derived from the classic tabby gene, shall be uniquely different with as little "bulls-eye" similarity as possible. Pattern shall instead be random, giving the impression of marble, preferably with a horizontal flow when the cat is stretched. Vertical striped mackerel influence is also undesirable. Preference should be given to cats with three or more shades i.e. agouti background, markings, and dark outlining of those markings. Contrast must be extreme with distinct shapes and sharp edges. Belly must be spotted. There is an M on the forehead, two or three spirals on cheeks and an unbroken line runs back from outer corner of eye. There are thumb marks on the ears and one or two broken or unbroken necklaces on the upper chest. The legs are barred and the tail ringed with a solid coloured tip. The soles of the hind feet are solid coloured.

SMOKE

The undercoat of all smokes is slightly lighter than the roots of the shaded hairs. Shadowy tabby markings permissible in all colours. Scattered white hairs and rusty or other shadings should not be penalised in an otherwise good kitten. In all tortie varieties, type (body conformation) is deemed more important than distribution of patching.

The smoke effect is produced by a silvery undercoat combined with overhair that is tipped with colour with a silver root. There is a general variation in the degree of smoking in cats, and breeders should select for those with the greatest degree of silvery roots and undercoat. The reduction of pigment overall allows the hidden tabby patterns present in all cats to show through in a sort of ghost tabby pattern in the smoke.
